

Intelligent Compaction and Pave-IR in Minnesota

2012 North Dakota Asphalt Conference

April 4, 2012

Greg Johnson

Mn/DOT – Asst. Bituminous Engr.

Intelligent Compaction (Video)

MnDOT Intelligent Compaction Projects

- 2004
 - District 3, Mn/ROAD, Demo
- 2005
 - District 1, US 53, Duluth, Granular (Taconite)
 - District 7, US 14, Janesville, Non-Granular, Granular
 - District 8, US 12, Atwater, Base
- 2006
 - District 2, TH 64, Bemidji, Granular
 - District 3, Mn/ROAD, Misc — Non-Granular
 - Metro District, I-494 Valley Creek Road, Granular Shoulders
- 2007
 - District 3, US 10, Staples, Granular
 - District 4, US 10, Detroit Lakes, Non-Granular, Granular
 - District 7, TH 60, Worthington, Non-Granular, Granular
 - Metro District, TH 36, St. Paul, Non-Granular, Granular
- 2008
 - Olmsted County, CSAH 2, Non-Granular, Base
 - Kandiyohi County, CSAH 4, Base, HMA (Breakdown)
- 2008 (cont)
 - Kandiyohi County, CSAH 40, HMA (Breakdown)
 - District 3, Mn/ROAD, Non-Granular, Granular, Base, Base, FDR, SFDR
 - District 7, TH 60, Worthington, Non-Granular, Granular
 - District 8, TH 71, Wilmar, HMA (Breakdown)
- 2010
 - District 3, TH169, Garrison, HMA (Breakdown)
 - District 7, TH 13, Albert Lea, HMA (Breakdown)
 - District 6, TH16, Hokah, SFDR
 - Metro District, TH 610, Granular
 - Olmsted County, CSAH 10, Granular (Compactor Rejected)
- 2011
 - Metro District, TH35, HMA (Pneumatic, Vibratory)
 - District 7, TH 30, Amboy, FDR, SFDR (Padfoot)
 - District 7, TH 83, Waldorf, FDR (Padfoot)
 - District 8, TH 212, FDR (Padfoot)
 - District 8, TH 23, Granular (Compactor Rejected)

Total IC Projects = 25

Mn/DOT Priorities

- Uniform Compaction - All rollers in a train having a display showing # of passes (GPS)

- Uniform Temperature - Surface Temperature behind Screed (Pave-IR)

1989 – “Effect of Compaction on Asphalt Concrete Performance”

Each 1% increase in air voids
(over 7 percent) tends to
produce ~10 percent loss in
pavement life (~1 year less life)

Challenges/Solutions

Incorrect Coordinates

Challenges/Solutions

Not Turning Off the GPS System

Plant Site

Implement Better QC Requirements

County Road

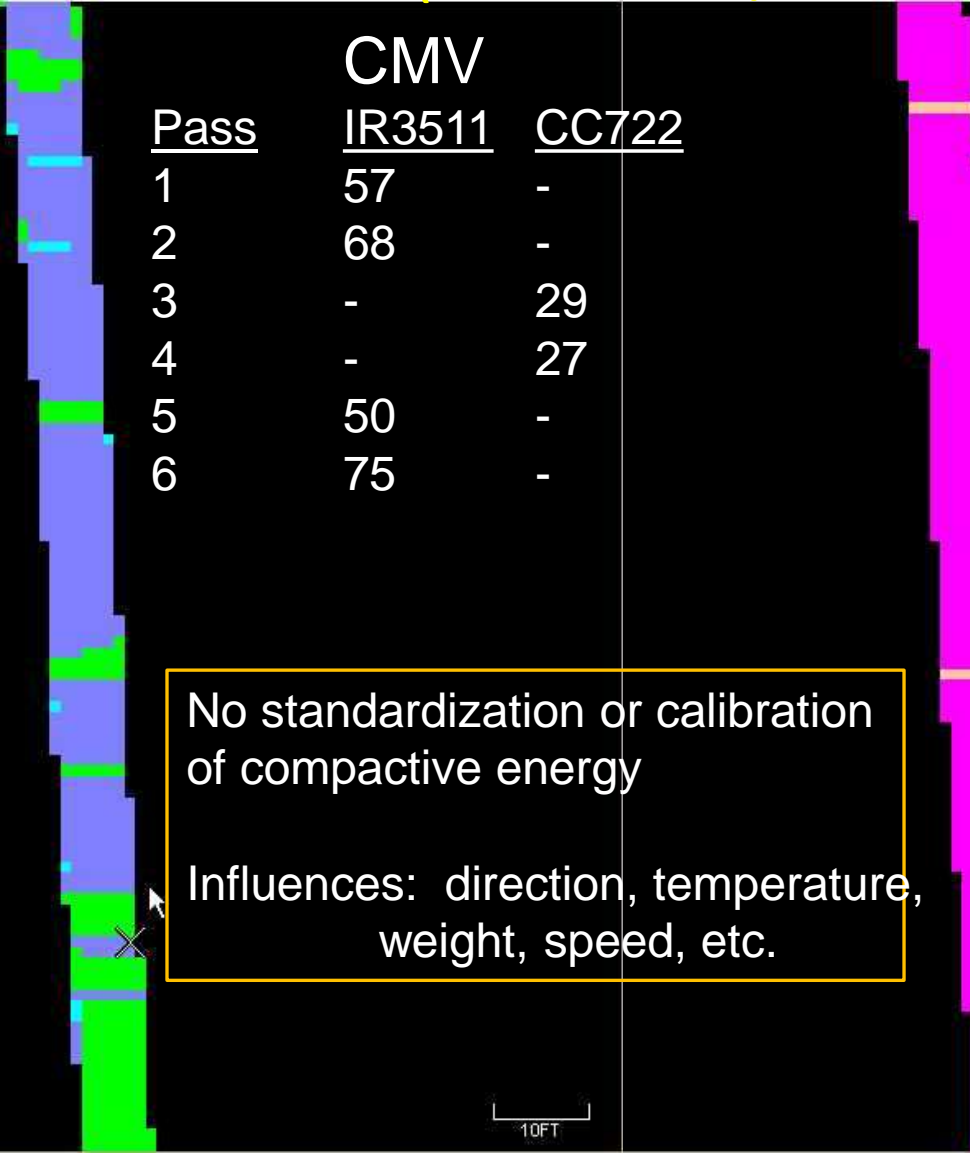

Compaction Measurement Value (CMV) differences (same time/location)

IR3511

54 Hz
0.80 mm

CC722

45 Hz
0.93 mm

No standardization or calibration of compactive energy

Influences: direction, temperature, weight, speed, etc.

Benefits of Intelligent Compaction - Contractor

- Real-time feedback to operators
 - Coverage
 - Prevent Gaps between passes
 - Compaction Curves
 - ↓ Number of Passes
 - Identify Weak Areas
 - View Temperature
 - Operator accountability
- GPS System Transferrable

Benefits of Intelligent Compaction – Agency

- Improved uniformity –better performance/longevity
- Increase information – better QC/QA
- Decreased maintenance
- Decreased sampling/testing (taking cores)
- Shortcomings of density acceptance process
 - Limited number of locations
 - After compaction is complete

Pave-IR Purpose

- Promote more uniform, higher quality pavements
- WADOT, NCAT, And TTI found thermal uniformity useful for detecting segregation.
- A segregated mat increases the contractor's chances of QC/QA core being in a poor/low density area.
- A segregated mat increases agency's risk of early distress

What will this technology do for you?

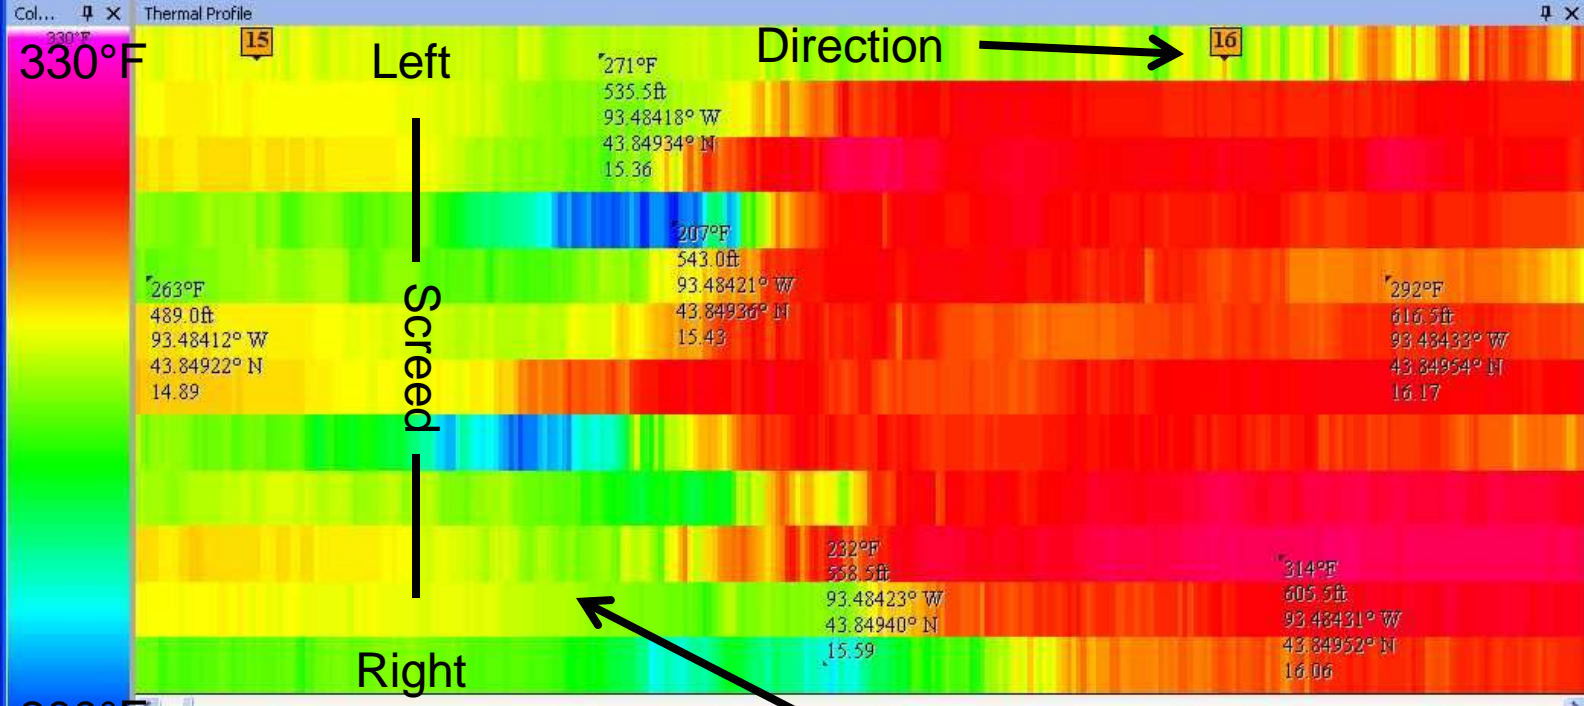

- Identify in real time if you have temperature segregation related issues due to:
 - End of truck
 - Streaks – paver/plant adjustments
 - Random – small clumps
 - Production temperature

MOBA Pave-IR

12 sensors spaced 1 foot apart,
reading interval = every 6 inches

Properties

Thermal Profile

Temperature Characteristics

2011 Mill & Overlay on TH 35

- May – June (Produced at Plant A)
 - Max. as high as 380°F
 - Mean 313°F
- August – September (Produced at Plant B)
 - Min. 200°F
 - Mean 268°F

Comparison to Texas Thermal Spec Summary

- # of 150 foot profiles = 3448
- May – June
 - 1491 profiles
 - 70% Moderate (25-50°F)
 - 27% Severe (> 50°F)
- August – September
 - 1957 profiles
 - 52% Moderate (25-50°F)
 - 18% Severe (> 50°F)

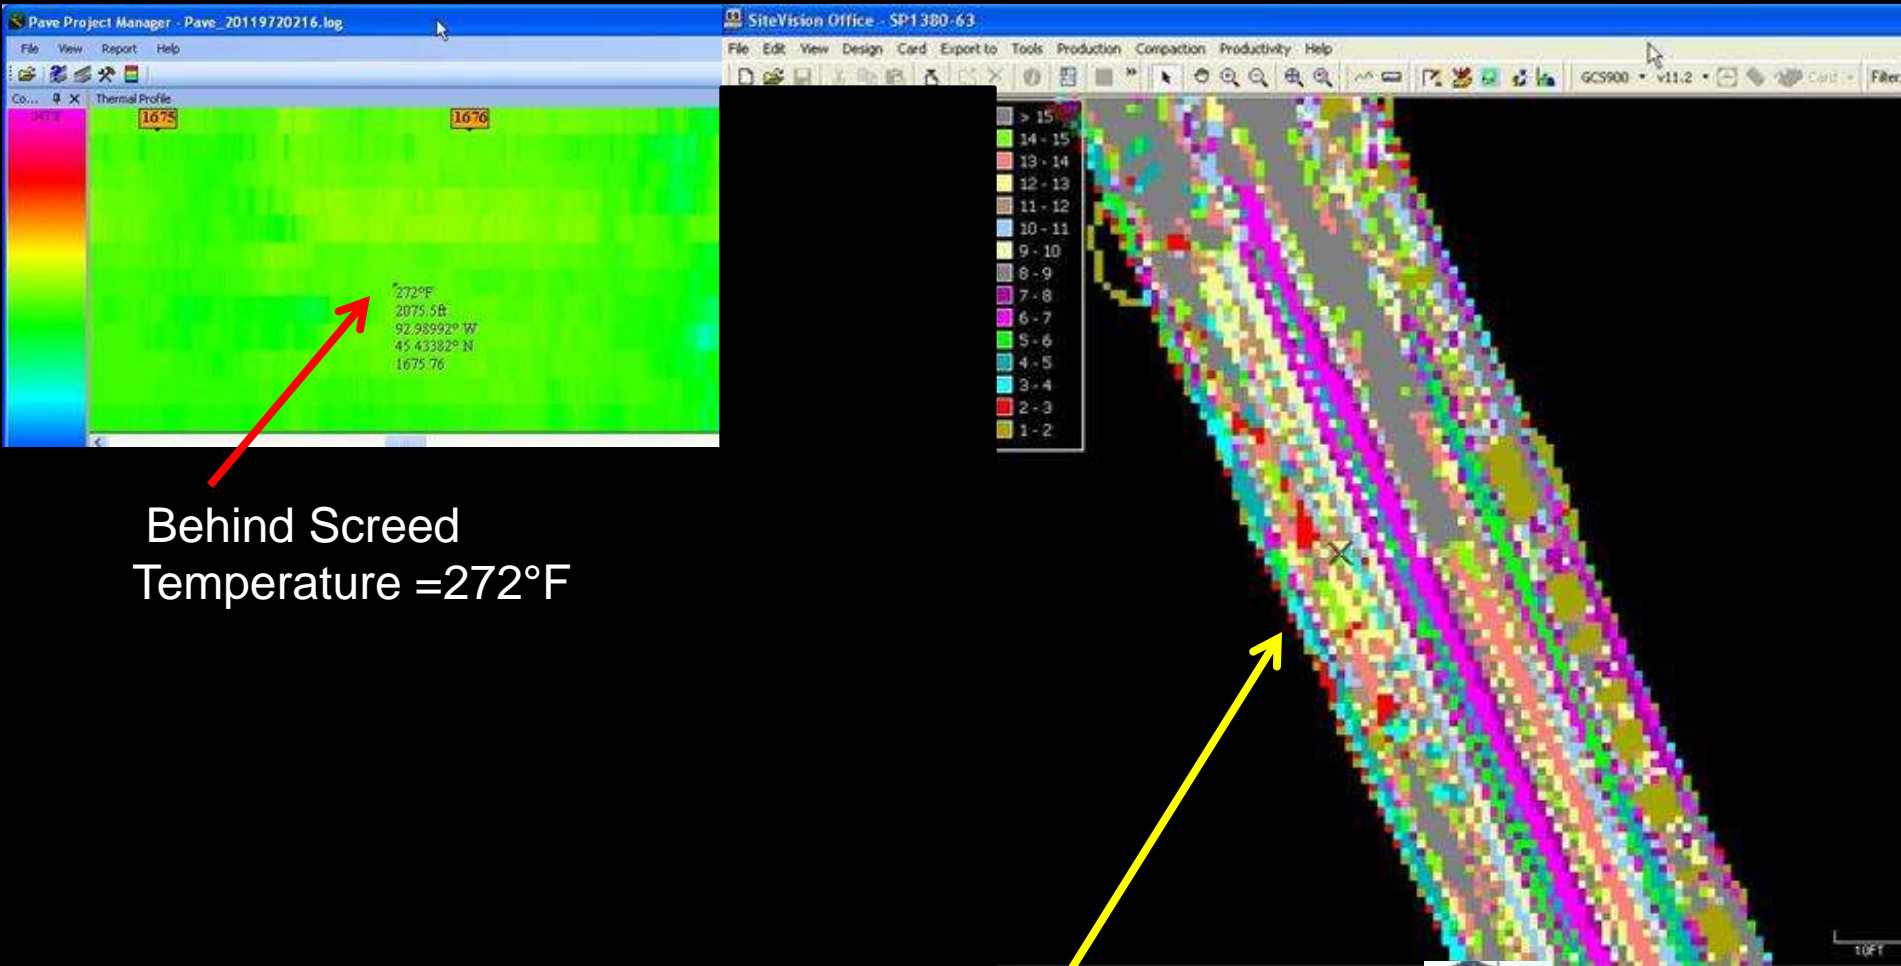

Pave-IR Benefits

- Real-time feedback to the contractor so needed changes can be made
- Tracks placement characteristics (paver speed, stops, temperature)
- Collects where low/high temperature regions are located
- Improves pavement quality and performance

Putting it Together

Screed Temp – Pass Count- Density

Conclusion

IC and Pave-IR together can provide:

- Feedback and control of the paving process
- Increase uniformity of mix placement and compaction
- Increase the performance of our pavements
- Ability to decrease the amount of QC/QA testing needed
- Proof of quality placement and compaction
- Increased accountability

TH 18 (169) Elk River, 1920's

Thank You
