

Milling for Smoothness, Milling for Profit

Kyle Hammon

Product Manager- Mills & Stabilizers

Roadtec, Inc.

People and Planning

The first step towards achieving a smooth milling job occurs way before the construction process begins

Everyone involved in the milling process contributes to the overall smoothness of the job, including:

- a. Mill operators
- b. Ground person
- c. Truck drivers
- d. Clean up.

Do I have what I need?

Do I have all the correct safety equipment

Do I have enough teeth to get through the day?

Do we have a Game Plan for a Productive day?

It is important to understand the job. Cutting it once and Correctly is by far the most economical way for the Company.

Choose the proper equipment

Where Do We Start?

Tracking

Watch to see how the machine is tracking.

You may be keeping a good line with front tracks but if your tracking is off then you will have several problems.

Again the deeper you are the more this is critical.

You are looking for marking in the pavement as shown below.

ASTEC INDUSTRIES, INC.

ROADTEC

Keeping a straight line

The deeper the cut the more that a straight line is important.

Side loading the cutter will reduce bearing life

End ring wear.

If you are not paying attention you will be into the holders very quick.

Cross hairs in the cut

Look for a cross hatch pattern in the cut.

- You should be seeing a up and down cut pattern.
- If the pattern is only going in one direction then this is what you are trying to avoid.
- You may need to wipe the fines clean before you can see this pattern.

Cross hairs in the cut

2 Types of Smoothness

- Longitudinal Smoothness (Ride)
 - How to achieve
 - Factors on Ride
- Surface Smoothness
 - How to achieve
 - Factors on surface texture
 - Drum maintenance
 - Speed (of what?)
 - Drum pattern
 - Impacts on Production

ROADTEC

Keep it Clean

How can you mill with this.

If you have this to work with you will never achieve grade.

Why?

No really, clean up your mess

Oh that Pile.

Our shovel is on the water truck.

The automatics will take that out...

Clean up your mess

Clean up after you pick up.

What will happen when you set back down.

Instead of taking the time to clean this up I

Will just guess how thick this is.

ASTEC INDUSTRIES, INC.

ROADTEC

Speed and Slope

ASTEC INDUSTRIES, INC.

ROADTEC

Continuous Milling

There are a lot of forces generated during milling. When you stop so do the forces.

Plus all of the teeth now cut in one spot, no longer spread out.

Production Tradeoff

New holders have been spotted in in various places. The wear shown here is not common to all the holders on the drum, some are worn more, some are worn less. This cutter does not leave a very good looking pattern.

90% of the holders on this drum are worn like this. New holders are 2" from seat to face

Caliper set at EXACTLY 2"

Same holder in previous
picture turned 180 degrees

The tooth tip should be centered on the blue line.

The red line shows the misalignment of the tooling due to the face wear on the tooth holder.

Pattern Comparison

5/8" Triple Wrap at 100 FPM

7/8" DHQW at 100 FPM

Same Speed Comparison

Single Hit Profiling Drum

- 100 fpm
- 8 hr shift/7 hr milling = 56,000 sq yd/day
- Crew cost (operator and ground man) = \$720 for the day
- Let's say 250 Teeth per day
- @ \$5 per Tooth = \$1250
- Fuel Usage = 25 gph
 - 200 gal/day
 - \$700 @ \$3.50 /gal

\$0.05 per sq yd

Double Hit Profiling Drum

- 100 fpm
- 8 hr shift/7 hr milling = 56,000 sq yd/day
- Crew cost (operator and ground man) = \$720 for the day
- 20% less Teeth = 200
- @ \$5 per Tooth = \$1000
- Fuel Usage = 25 gph
 - 200 gal/day
 - \$700 @ \$3.50 /gal

\$0.04 per sq yd

From sand patch tests

course milled surface can use 4 times more material to fill than a fine milled surface

This relates to about 25 tons per lane mile

The Point of Breakout

Same Texture – Very Different Production

Full Lane 8mm (0.3") standard at 45 FPM

1/2 spaced DHQW at 140 FPM

Same Texture Comparison

Single Hit Profiling Drum

- 45 fpm
- 8 hr shift/7 hr milling = 25,200 sq yd/day
- Crew cost (operator and ground man) = \$720 for the day
- Let's say 160 Teeth for the day
- @ \$5 per Tooth = \$800
- Fuel Usage = 20 gph
 - 160 gal/day
 - \$560 @ \$3.50 /gal

\$0.08 per sq yd

Double Hit Profiling Drum

- 140 fpm \approx 3 X production
- 8 hr shift/7 hr milling = 78,400 sq yd/day
- Crew cost (operator and ground man) = \$720 for the day
- 20% less = 497 w/ production gain
- @ \$5 per Tooth = \$2485
- Fuel Usage = 25 gph
 - 200 gal/day
 - \$700 @ \$3.50 /gal

\$0.03 per sq yd

Apples to Apples

**3/8" spaced Single Hit "Profiling"
Drum at 120 FPM**

**1/2" spaced Double Hit Drum at 140
FPM**

Micro-mill surface at 65 FPM
