NDLTAP TRAINING

*Helping local entities expand their skills
Delivering all your training needs*

NDSU UPPER GREAT PLAINS TRANSPORTATION INSTITUTE WWW.NDLTAP.ORG

Topics – Events/Training

- County Road Day
- Motor-grader Operator Training - Video
- Request a training
- Safety Tailgate Talks

**If you want to host a County Road Day
LET US KNOW**

A yellow excavator bucket is shown in a close-up, angled view, resting on a pile of light-colored gravel. The bucket is the central focus of the image, with its hydraulic arms and joints visible. The background is a clear, bright blue sky.

Safety Talk

Staying Fit for Snowfighting *(PDF, 830K)*

Nov 2018 – Knead the toilet paper in your hands to loosen the inner cardboard core. Remove the core, compress the roll and place inside the coffee can. Pour one bottle of rubbing alcohol into the can, let it soak in and carefully light the top of the paper. It should burn with a clean flame.

Tailgate Talk

Information You Can Use to Prevent Accidents & Injuries

You know you're stressed out from the heat when you sweat a lot, have muscle spasms, get a headache, get tiny red bumps on your skin, or feel dizzy, weak, or sick to your stomach. If this describes you on a hot work day, drink plenty of water throughout the day. Take your rest breaks in a cool or shady area. Massage muscle cramps. Use a mild drying lotion to get rid of heat rash. Taking salt tablets is NOT necessary. There's enough salt in your normal diet!

If a fellow worker passes out from the heat, get them into shade, loosen clothing to cool them down, and give water only when they're conscious.

WHAT SIGNS DO YOU NOTICE WHEN YOUR BODY IS TOO HOT?

First, you may notice that you are tired and less mentally alert. This increases the danger of accidents. You may sweat. The body produces sweat so the evaporation will cool you off. Sweating isn't as effective if the air is very humid, because not as much sweat evaporates. Heat rash is possible. You get it when your sweat glands swell and get plugged up. You can get sunburn if you're in direct sunlight too long without using a sunscreen to protect your skin. Sunburn can be painful and may even lead to skin cancer.

HEAT STRESS, EXHAUSTION, & STROKE

If you don't pay attention to these early symptoms and get out of the heat, you can get **heat stress**. What does this do to your body?

The first symptom is usually **heat cramps**. If you don't replace the fluids and salts (called electrolytes) that you lost by sweating, you may get muscle pain or muscle spasms. These are most common in the arms, legs, back, and stomach.

Heat exhaustion can follow. Your whole body (especially your circulatory system) is extremely stressed out. Some possible symptoms are a pale and flushed face and neck, clammy skin, heavy sweating, fatigue, shortness of breath, headache, dizziness, or fainting, nausea, vomiting, rapid heartbeat and breathing.

Heat stroke is the most serious stage of heat stress. Your body temperature shoots up. 50% of people with heat stroke die. Symptoms are: dizziness and confusion; red, hot, dry skin; nausea and vomiting; very little sweating; rapid pulse, high body temperature around 105 degrees; convulsions; fainting. Anyone with **heat stroke** must be taken to a doctor or hospital immediately.

When Your Body Gets Hot
