

# NDLTAP Pavement Preservation Outreach Boots On The Ground

Gerard Feist NDLTAP

Tom Wood ASTECH Corp.

# What Is Boots On The Ground?

- It is on site visits
- Open discussion on various topics
  - Discussion is tailored to wants and needs of attendees.
  - Can include pavement reviews
  - Discussions on equipment needs and operations
  - Safety
- Goals to share information on best practices for maintaining HMA pavements
- No Cost to you
- Current schedule western ND - May 10<sup>th</sup> thru May 20<sup>th</sup>

# Leaders of Discussion

- Gerard Feist NDLTAP
- Rodney Ness Swanston Equipment
- Thomas Wood ASTECH Corp

Gerard Feist NDLTAP Asphalt Consultant, Gerard worked for Burleigh County in various roles specializing in crack sealing, patching, and paving. He brings a broad background and expertise in equipment operations and pavements.

Rodney Ness, Swanston Equipment Representative, 31 years at Burleigh County with various roles from equipment operator to road superintendent. Rodney is committed sharing his vast experience's so that attendees can safely and efficiently maintain their pavements.

# Goals

- Encourage sharing of information from old timers and new workers
- Help eliminate having to recreating the wheel
- Build strong network between agencies to share information
- Help agencies with maintaining their pavement network using strategic program of pavement preservation methods

# How To Take Part In Boots On The Ground?

- Contact Dale Heglund
  - [dale.heglund@ndsu.edu](mailto:dale.heglund@ndsu.edu)
  - 701/318/6893

# Pavement Preservation

- "a program employing a network level, long-term strategy that enhances pavement performance by using an integrated, cost-effective set of practices that extend pavement life, improve safety and meet motorist expectations." Source: FHWA Pavement Preservation Expert Task Group. Sep 12, 2005
- It involve doing the right thing to the right road at the right time
- The goal is to keep good roads good longer
- Pavement Preservation is cost effective

## CHAPTER 5: CONCLUSIONS AND RECOMMENDATIONS

The RSL- service life enhancement since intervention - for all treatments from two agencies (MnDOT and NDDOT) appear to be relatively close to each other, except for the BOC substrates overlaid with micro-surfacing (Table 5.1). However, this could be explained through the t-tests performed on BOC substrates overlaid with micro-surfacing data sets, in which results showed the observed difference between the sample is convincing enough to say that the two data sets (MnDOT and NDDOT) differ significantly.

Table 5.1 Weibull parameters obtained for various treatments overlaid on different substrates.

Type of Treatment	Type of Substrate	Threshold Time to Failure, $m$	Failure Mode, $p$	Remaining Service Life, $n$
UTBWC	BOB <sup>1</sup>	0	Wear-out failures	8
	BOC <sup>1</sup>	2		9
Chip Seals	BOB	0	Wear-out failures	8-10
	BOC <sup>1</sup>	0		9-11
	BAB	0,2		8-9
Micro-surfacing	BOB	0,2	Wear-out failures	8-9
	BOC	0		8-9
	BAB	0		8-9

<sup>1</sup>NDDOT does not have substrates that have been overlaid with this type of treatment.

The significant difference observed between data sets from t-test analysis. The limitation of discrepancies may stem from multiple factors, such as an insufficient amount of data points and limitations in performance data that lead to reduced accuracy in the estimation of remaining service life, etc.

Regardless of substrate types, UTBWC has an RSL of 8 to 13 years; chip seals have an RSL of 8 to 10 years; micro-surfacing has an RSL of 8 to 11 years (excluding BOC data, which showed significant disparity between the means of the two data sets from t-test analysis). All treatments have a pattern of wear-out failures, which are an indication that the treatments are effective in providing life extensions as the cause of failures is not random.

# Keys to Successful PPP

- Understand what's going on your pavements
- Have a pavement management program
  - Rates pavements
  - Predicts future conditions
  - Help with development of budgets
  - Can answer what it options
- If you don't measure it, you can't manage it!
- Keeping update on latest developments and methods
- Training of current and new employees
- Paying attention to small details and the big issues will not happen

## UGPTI Distress Guide

# Pavement Road Resource Association (PRRA)

The screenshot displays the PRRA website interface. At the top, the browser address bar shows <https://roadresource.org/toolbox/criteria>. Below the address bar, there are two dropdown menus labeled "PLEASE SELECT" and two navigation buttons: "PAVEMENT CRITERIA" and "PAVEMENT PHOTOS".

On the left side, a vertical list of pavement treatments is organized into color-coded sections:

- Blue section:** FOG SEAL, REJUVENATING FOG SEAL, SLURRY SEAL, MICRO SURFACING, CAPE SEAL, ULTRA THIN LIFT HMA, CHIP SEAL, CRACK SEAL, SCRUB SEAL.
- Light blue section:** TACK COAT, PRIME COAT.
- Light green section:** COLD PLANING & MICRO MILLING, HOT IN-PLACE RECYCLING, COLD IN-PLACE RECYCLING, COLD CENTRAL PLANT RECYCLING, FULL DEPTH RECLAMATION.
- Yellow-green section:** BASE STABILIZATION, SOIL STABILIZATION & SOIL MODIFICATION.

To the right of the list is a vertical cross-section of a road pavement structure. A 3D block diagram of a road cross-section is shown to the right of the list. The diagram illustrates the various layers of a road pavement structure, with labels A, B, C, D, and F indicating different layers or treatments. The top layer is dark asphalt with visible cracking. Below it is a lighter-colored base layer, followed by a subgrade layer. The labels A, B, C, D, and F are positioned along the bottom edge of the diagram, with arrows pointing to the corresponding layers.

# What is PRRA?

- The Pavement Preservation & Recycling Alliance provides a collective space to bring industry and agency together for the advancement of sustainable, eco-efficient, and innovative pavement applications.

# There's MORE FOR EVERYONE in a JOHN DEERE *New Generation* Tractor

### More "Boof"

Not fat, mind you, but "boof" where it counts . . . in engine parts, transmission, and fuel drives. Give the chain of heavy-muscled parts the starting gun and you've got yourself a "stampede" of power to whip big loads through tough jobs.

### More "Cream"

The kind that comes to the tip between income and expenses—PROFIT. That's because John Deere Tractors milk more performance from every drop of fuel. Operating costs come down—leaving more cream on top for you.

### More "Elbow-Room"

OK, so you take up a little more room, front to back, too—makes no difference on a John Deere with its two-direction adjustable seat. As easy to fit to your dimensions as the belt in your trousers.

### More "Get Up 'n' Go"

With a John Deere, a fellow can breeze through a lot of work after school and find in time to meet the "date" on time. Split second governor a tin really gets a spurs to "barney" when it's needed.

### More "Manageable"

It's a "body's tractor" . . . just right for the farm wife who gives hubby a helping hand now and then. With its light-touch brakes and power steering, a lady makes turns easy as putting up a coat.

### More "in the Bank"

Nice to know that when a New Generation Tractor does need servicing or parts, both are "on deposit" and instantly available at a nearby John Deere dealer's. To a busy farmer, that's as good as money in the bank.

### More "Good Years"

A veteran farmer can spot a good thing when it comes along . . . like this New Generation Tractor. Hardly takes the chore out of driving; you don't feel the "years" even after a long day's work.

### More "Self-Reliance"

These John Deere Tractors have built-in "watchdogs." Engine ventilator to reduce "acid indigestion" in the crankcase; force-feed lube system; safety clutch on the PTO . . . to name a few! With a "self-protecting" New Generation Tractor, you work confidently.

JOHN DEERE design,

### Pick the Power Size You Prefer

Yes, sir, the "choice pickin's" are in the New Generation lineup . . . from the new 117 h.p. "5010" Tractor (left); right on through the 80 h.p. "4010," 55 h.p. "3010," 45 h.p. "2010," and the 35 h.p. "1010." Test one on your farm soon; ask about the John Deere Credit Plan.

125 YEARS

dependability and dealers MAKE THE DIFFERENCE
