

New Mexico High Crash Corridor Effort Based on Integrated Real Time Data

Captain Joseph Romero

New Mexico State Police

What is Peregrine?

Connect &
Integrate

Enrich &
Organize

Interact &
Collaborate

Interoperability & Data Sharing

With Peregrine, you can:

- Share information with local agencies, including (but not limited to) RMS, CAD, ALPR, BWC, narratives, and fixed cameras
- Control when, how, and with whom you share your data
- More effectively collaborate with local agencies — from deescalating an active emergency to reducing regional CMV trends

The screenshot displays the Peregrine software interface with a search filter for 'CATALYTIC CONVERTER' highlighted in a red box. The interface shows a table of search results categorized by agency: Evidence (Centerville PD), CAD incidents (Madison PD), and Reports (Fairview PD). The table columns include 'Connections', 'Case Number', 'Incident Number', 'Call Date & Time', 'Agency Name', and 'Case Number'. The search results are as follows:

Category	Agency	Case Number	Incident Number	Call Date & Time	Agency Name	Case Number
Evidence	Peregrine · Centerville PD					
		MISSING CATALYTIC CONVERTER missing catalytic converter	24-007658	24-007123	No value	
View all evidence >						
CAD incidents	Peregrine · Madison PD					
		241234567 REFERRED TO ONLINE REPORT Initial Narrative - 487 FOR CATALYTIC CONVERTER All dates...	No connections	241234567	9 Nov 2024, 10	
		247654321 GRAND THEFT Initial Narrative - CATALYTIC CONVERTER WAS STOLEN All ...	CRIME/INCIDE...	247654321	5 Nov 2024, 08	
View all CAD incidents >						
Reports	Peregrine · Fairview PD					
		CASE REPORT 24-200002 Catalytic converter stolen sometime before 8 am this mornin...	No connections	FAIRVIEW	24-226698	
		CASE REPORT 24-123456 Upon inspection catalytic converter was missing.	ITEM OTHER/...	FAIRVIEW	24-656513	

Driver Safety

With Peregrine, NMDPS can now receive alerts and query the following:

- Report **geographic hotspots** of CMV crash incidents
- Alert when **flagged drivers (DACH)** operate CMVs statewide
- Flag **suspected chameleon carriers** using active USDOT numbers
- Track and alert on **previously confiscated** Mexican CDLs
- View USDOT's statewide law enforcement **contact history**
- Track CMV **traffic violations** across all agencies
- Analyze carrier **histories** to identify education needs
- Monitor **frequency** of carrier-law enforcement interactions

Educating the Industry

Peregrine Allows Us To:

- Track companies and citations issued
- Track companies' violations
- Track companies' crashes
- Generate reports for us to share with companies
- Allows agency to educate companies that are consistently not passing inspections

Example

Works with our Smart Roadside Technology

Coming soon is the integration of all databases at the Port of Entries. We don't know what that looks like, but we are excited about the possibilities.

Overall Takeaway

Challenge:

- Limited manpower
- High-risk problem areas
- Nefarious companies
- NM is 5th largest state in the nation
- Bureau is stretched thin

Solution:

- Transformative software (Peregrine)
- Proactive instead of reactive
- Real-time data helps pinpoint problem areas
- Immediate action when dispatching officers
- Concrete data to measure impact, refine strategies
- Make a meaningful difference

So why do this?

Like many states, New Mexico faces significant challenges in our mission to ensure safety on our roads. We grapple with limited manpower, high-risk problem areas, and, yes, those nefarious companies and drivers who endanger lives. Being the fifth-largest state in the nation, our CVE bureau often feels like it's stretched too thin to make the kind of widespread impact we know is needed.

But I hold onto a powerful truth: Data is normally good for one thing—revealing the patterns of the past. For too long, state agencies, including ours, have been stuck in that cycle—reacting to yesterday's problems and chasing trends instead of staying ahead of them.

That's why I am so excited about this **transformative software**. For the first time in my career, I have the tools to be **proactive** instead of retroactive. I can see real-time data, pinpoint problem areas, and take **immediate action**. I can dispatch officers to the places where they're needed most, when they're needed most—and I know we're making a meaningful difference.

What's more, after any operation, we're no longer left guessing. We have concrete data to measure our impact, refine our strategies, and truly understand the effect of our work.

This is more than just technology—it's a game-changer for law enforcement. It's putting us back in the driver's seat, allowing us to shape the future of road safety instead of being shaped by the past.

With that, let me give you a sneak peek into what this incredible system can do.
